

Repository Naming Convention

Last updated by | Nilton Ferreira | 12 Nov 2025 at 11:40 GMT

Repository Naming Convention:

department-resource-project_name

Department separated by "-" (hyphen)

Resource - We will get multiple repo's per use-case. For example, synapse pipeline and eventually resource templates will be stored in separate use-case repo's. It is important to add a term like `code`, `sql` or `synapse`.

Project name Use snake_case convention - wording separated by "_" (underscore)

Components:

department

| audit, finance, gfpr, operations, tax. Suggestion is to use only 3 letters to identify it (aud, fin, gfp, ops, tax)

resource

| code, sql or synapse

project_name

| ex: "ciber_security" or "enterprise_risk_management"

How the first 2 use cases would look like:

aud-code-cyber_security

ops-code-enterprise_risk_management
